

Basics

2024年10月23日 16:50

```
only one main()
{>=0 program statements}
each statements ends in ";"!
/* */ multiple-line comments
// single line comments
comments will not be translated
#include include information from library->a collection of sub-programs
eg. #include<iostream> deals with I/O->standard using <>
#include "drawing.h"->user defined C++ lib using""(name of header file ends
in ".h" or ".hpp")
```

cin: an object to read from
cout: an object to print to
cerr: an object to print error messages to
blanks/tabs/lines are ignored!more than one statement can be on one line
integers-int
characters-char
single character is represented in single quotes '
'\t' tab '\n' new line '\b' backspace '\0' null character
character strings using "": not a basic data type!!->sequence of basic char
data

a binary digit =bite=1/8 byte
byte is the smallest amount of data computer can bite at once
char- 1byte using ASCII '0'=48!
0-9 a-z A-Z _ might appear in an identifier(name)
first character cannot be digit
a variable is a named memory location for a value that we can write/retrieve/manipulate
can define several vari of same type at once
/division
%modulus

OPERATOR	DESCRIPTION	ASSOCIATIVITY
-	minus	Right-to-Left
++	increment	
--	decrement	
*	multiply	Left-to-Right
/	divide	
%	mod	
+	add	Left-to-Right
-	subtract	
=	assignment	Right-to-Left
