relational operators eg. >= != 's result is **boolean value**  
logical operators eg. ! ||  
boolean values: true internally represented by 1, false by 0,  
any non-zero number is considered true  
use extra parentheses to enforce the order of operations  
if(x=3)-> true  
if(x=0)-> false  
if-else operator: ?  
if-else expression: booexp ? thenexp: elseexp  
**this expression has value**  
dangling else: 缺少bracket所以else子句匹配不明确  
规则: else与最近的未配对的if配对  
**缩进对判断没有作用** if后仅一句指令可以省略{}是因为默认if后一句一定是属于if  
for(<for-initialization>;<bool-exp>;<post-processing>)  
可以当作while用  
for-initialization 的 variable 作用域只在for内, for完了就不能用了  
循环体可以为空
